Ongoing and Future Projects

The South Bingham Soil Conservation District will continue to maintain and support a complete plant materials program through its partnership with the Aberdeen Plant Materials Center by maintaining facilities, equipment, and providing funding for employment. To accomplish this, the District invites staff from the PMC to Board meetings to discuss options.

The district will continue the project to create and promote monarch habitats in the area. To accomplish this, the district has partnered with the Plant Materials Center and others.

The District is also pursuing a water conservation project with the Aberdeen-Springfield Canal Company.

Results: Raised money to support the summer labor program and facilities at the Plant Materials Center.

Our Mission: To take the available technical, financial and education resources, whatever their source, and focus or coordinate them so that they meet the needs of the local land user for the conservation of soil, water and related resources.
