Executive Summary

The Caribou Soil Conservation District is one of 50 Conservation Districts in Idaho. Conservation Districts are subdivisions of state government and charged with carrying out a program for the conservation of soil, water, and other natural resources.

Conservation Districts are the primary entities to provide assistance to private landowners and land users in the conservation, sustainment, improvement and enhancement of Idaho’s natural resources. They are catalysts for coordinating and implementing conservation programs, channeling expertise from all levels of government into action at the local level. Programs are non-regulatory; science-based technical assistance, incentive-based financial programs and informational and educational programs at the local level.

Both by legislation and by agreement the USDA Natural Resources Conservation Service provides technical assistance to landowners and land users through Conservation Districts. Each Conservation District in Idaho has a signed Mutual Agreement with the Secretary of Agriculture and the Governor of Idaho that establishes a framework for cooperation.

It is the goal of the Caribou Soil Conservation District’s elected officials to promote the wise use of our natural resources. This Five-Year Resource Conservation Business Plan/Annual Plan was developed not only as a guide, but an action plan for meeting those needs. The Conservation District encourages cooperation among landowners, government agencies, private organizations, and elected officials. Through knowledge and cooperation, all concerned can ensure a sustainable natural resource base for present and future generations in the Caribou Soil Conservation District.

This document identifies the resource needs in the Conservation District and presents a resource conservation action plan for meeting these needs.
Section 1: Physical Characteristics of the Caribou Soil Conservation District
(IDAPA 60.05.02.025.01)

Mission Statement
The Caribou Soil Conservation District is dedicated to promoting wise land use, providing information and education and giving assistance to anyone looking for ways of conserving our natural resources.

Organization of the District
The Caribou Soil Conservation District is a political subdivision of the State of Idaho, authorities, powers and structure contained in Conservation District Law, Title 22, Chapter 27, Idaho Code.

In accordance with District Law, landowners voted overwhelmingly on June 9, 1951 to organize the Soil Conservation District.

Function of the Caribou SCD
To make available technical, financial and educational resources, whatever their source, and focus or coordinate them, so that they meet the needs of the local land managers in conserving soil, water and related natural resources.

Who We Serve and Why
The District serves the people of Caribou County and is committed to customer service, quality leadership, and the preservation and conservation of our natural resources for present and future generations.

Climatic Conditions:
Caribou County’s climate is dominated by cool, dry weather, with prevailing winds and weather patterns. The average annual precipitation is 19 inches. In the winter months, total snowfall averages almost 110 inches, and snow cover typically remains on the ground from November through March. Snow accumulation is greatest along the east-facing slopes as compared to the west-facing slopes, primarily as a result of prevailing winds which cause drifting.

Summer temperatures are mild, normally ranging from 42 to 80 degrees Fahrenheit, while winter temperatures normally range from 0 to 40 degrees Fahrenheit. Stream flow in area streams, including Pebble Creek and the Blackfoot River, are controlled by snow melt, precipitation, and groundwater discharge. Peak flows generally occur in April through June, during spring runoff, and decline to low-flow conditions by mid-to late summer.
The divide between the Bear River and Blackfoot River sub-basins is in many places not very distinct. It extends across open valleys that appear to the eye to be nearly level.

Critical Geographic Area

Historic and scenic Caribou County was founded in 1864 and is located in southeast Idaho, bordering Wyoming to the east and Utah to the south. The boundaries are the same as the Caribou Soil Conservation Districts.

Elevation in the County varies greatly from 5,000 to 9,500 feet. A large part of the County is occupied by old lava flows. Large patches of rock outcrop are common.

The Bear River has cut a box canyon through the lava beds, and the canyon becomes several hundred feet deep and three quarters of a mile wide about four miles southwest of Grace. The lowest point in elevation is where the Bear River crosses the boundary to Franklin County.

The southern and southeastern parts of the County drain into the Bear River which is a part of the Great Basin. The northeastern and northwestern parts drain into the Blackfoot and Portneuf Rivers, thus belonging to the Snake River Drainage System.
Section 2: Economic Conditions and Outlook  
(IDAPA.60.05.02.025.02)

Population and Employment

Caribou County’s population fluctuated over the decade before ending down 4.7 percent at 6,963. The County is at the hub of the Pioneer Historic Byway and the Caribou Scenic Byway, which bring in tourists. Soda Springs, named for its natural carbonated springs, has a geyser which erupts every hour on the hour. The County is also home to phosphate mining and processing, which helps the population enjoy a higher average wage than most other counties in Idaho. Caribou County has a very diverse and highly skilled work force. Nearly half the jobs in the County are in the production of fertilizer, phosphorus and weed killer. While mining and construction accounted for 10 percent of employment, manufacturing accounted for 22 percent. Government also provides an equal number of jobs.

Efforts to attract more tourism have helped diversify the economy through the addition of several service and trade businesses. The County heavily depends on natural resource-based industries, agriculture and mining. The major employers include: Agrium, Monsanto, Degerstrom, J.R. Simplot Mark III, Kiewit, Mullen Crane, Smith Construction, Broulim’s, and Lallatin’s.

Caribou County is unique economically. It has a strong agricultural base, tourism, recreation and mining.
Agricultural Economy and Outlook

With much of the economy derived from agriculture and related activities, maintaining viable tracts of agricultural and rangeland is a County goal. The Caribou SCD works with land managers on managing farms and ranches, and dairy and beef producers in protecting their herds and operating more efficiently. They encourage agricultural producers who need financial and technical assistance to contact the USDA NRCS or other agencies that can provide the technical expertise. A common goal is to help producers improve marketing skills and understand risk management skills essential for financial survival.

Land in Farms by Type of Land

- Cropland: 52.76%
- Pasture Land: 42.48%
- Other Land Uses: 4.76%
Section 3: Assessment of Resource Conditions, Trends, and Conservation Needs of the District (IDAPA.60.05.02.025.03)

Soil Erosion

Soil erosion has been greatly reduced in the County with the use of minimum tillage and the Conservation Reserve Program (CRP). CRP has been very active, at the present time the maximum of 28% of the agricultural cropland is in CRP, with 78,000 critical erodible acres placed in the program. The trend is to continue improving erosion problems with better conservation practices. With the best conservation practices the erosion rate would be around 1 ton per acre and extending on the steeper slopes and poor conservation practices to 20 tons per acre. On irrigated cropland that is in grain, alfalfa, pasture or potatoes, with a 5% or greater slope the erosion rate would be 8 tons per acre. On a 12% or greater slope it would be 12 tons per acre. On non-irrigated cropland in small grains, but not in CRP with a 0-4% slope the erosion rate would be 3 tons per acre. On a 4-8% slope it would be 7 tons per acre and on an 8% or greater slope it would be 15 tons per acre.

Percentage of Land Uses Adequately Treated

The District is working with the landowners and NRCS to adequately treat farmland in Caribou County. The District promotes USDA programs such as: ACEP, CRP, CCRP, CSIP, EQIP, GRP, RCPP, windbreaks, IDEQ SRF and 319 Water Quality Grant Program. They also promote partnership with non-government entities such as: ECC and TU.

The District estimates that approximately 75% percent of the cropland is eroding at less than T levels. The remaining 25% percent is eroding at greater than T levels.

Water Resources

Water resources in the County include the Bear River, Blackfoot River, and Portneuf River, and their tributaries. Water is a critical commodity in the County and a large portion of the cropland relies heavily on irrigation.

There are two drainage systems in the County, the Snake River Drainage and the Great Salt Lake Drainage. The Blackfoot and Portneuf Rivers flow into the Snake River drainage, and the Bear River flows into the Great Salt Lake.

There are three reservoirs in the Caribou County, the Alexander, Blackfoot, and Chesterfield reservoirs. The Blackfoot and Chesterfield reservoirs are used for irrigation. The levels on both of these reservoirs fluctuate from a high in the spring to a low in the fall. The Alexander reservoir is mainly used for power generation and flood control.

The City of Soda Springs has an outlet from its sewer-setting pond that runs into the river above the Alexander reservoir. The Bear River is also used to generate power and it fluctuates in elevation.
Surface Water Quality

The riparian areas in the County are in a variety of conditions. Some areas have been abused while other areas are in good to excellent condition. The Caribou SCD is looking at identifying riparian areas that have areas of concern and develop conservation practices that will repair those areas. They have worked with public and private land managers to ensure proper conservation practices are being carried out.

Water Quality Conditions and Trends in Caribou County

The District is working on improving conditions of the Bear, Blackfoot, and Portneuf Rivers. They have completed one planning project and three implementations projects on the Portneuf River and one on the Twentyfour Mile Creek, a tributary of the Portneuf River.

The District is currently administering two 319 grants bringing approximately $757,254.82 dollars into the County. One of the 319 grants is on the Blackfoot River, and will target sediment and nutrients. Its specific goal is to reduce agricultural pollutants and restore beneficial uses.

The other 319 project is on the Bear River. This project will reduce impacts of approximately 300 head of cattle on the stream and reduce sediment & nutrients going into the stream.

The District also helped a landowner receive an Environmental Coordination Committee, (ECC) grant worth approximately $30,000.00 dollars. The ECC grant is on Trout Creek, and it will eliminate an old dairy that lies directly on the creek. There have also been several other ECC grants within the District.

The Caribou SCD is also interested in improving the Chesterfield Reservoir. In years when snowmelt is insufficient to fill the reservoir, it’s down past the “death pool” stage during the irrigation season. A death pool is that level of water which is insufficient to support existing aquatic life. When the reservoir is drawn that low, the results upstream consists of a meandering, incised channel, which erodes and contributes sediment to the river.

Flooding

Major flooding occurred in the City of Bancroft in December of 1962 and January of 1963, this was a result of a warm spell melting snow and rain over frozen ground. At that time the City of Bancroft installed several canals and drainage ditches. Flooding has not been a problem since that time, but could occur again if conditions are right. Recently the City of Bancroft completed a major reconstruction project, which removed them from the flood plain zone listing.
Air Quality

The Clean Air Act is the law that defines EPA's responsibilities for protecting and improving the nation's air quality and the stratospheric ozone layer.

**Caribou Counties Air Quality** (Referenced: homefacts.com/airquality/Idaho/Caribou-County)

![Air Quality Chart](image)

**What Do These Numbers Mean?**

Higher is better. Homefacts looks at the measuring stations across the country and compares the amounts of each specific pollutant. A higher number means it has fewer amounts of that pollutant. For example: If your County has a 9.0 for Ozone, it means that 90% of the stations around the country are measuring higher amounts than your local station. Homefacts tracks the most recent local air monitoring and pollution testing results to create an overall Air Pollution Grade.

**Average Sulfur dioxide (ppm)**

Sulfur dioxide at the highest annual mean concentration is 0.03 parts per million. Current scientific evidence links short-term exposures to SO2, ranging from 5 minutes to 24 hours, with an array of adverse respiratory affects including bronchoconstriction and increased asthma symptoms.

The chart below is Caribou County’s average Sulfur dioxide level compared to the State of Idaho’s.
Threatened and Endangered Species

The Endangered Species Act of 1973 directs all federal agencies, or any project that has a federal nexus, to implement measures to protect all federally listed species found in the project area. These species greatly affect the farming and ranching communities. While often they bring federal funds to the District for project administration, they also bring the federal "nexus" for ESA consultation of these projects.

The Greater Sage-Grouse is the most recent topic for our area. But in 2015, the U.S. Fish and Wildlife Service found that the Greater Sage-Grouse was not warranted for listing.

NRCS developed the Sage-Grouse Initiative to help private landowners voluntarily conserve Sage-Grouse populations and habitat on their working lands. Technical and financial assistance is available through EQIP and WHIP for implementing specific practices. The ultimate goal of the Initiative is to help ensure sustainable use of good sagebrush habitat.

The decline in populations of a plant species is due to issues such as urban expansion, small acreage habitat degradation, and indirect or direct destruction. Destruction occurs through introduction of invasive species, over harvesting, and conversion of habitat to other uses. Restoration of threatened and endangered species is often hindered by a limited knowledge of their propagation.

Trends Impacting Conservation in Caribou County

- Poorly planned growth in agricultural areas.
- Increasing small acreage farms, five acres or less.
- Limited availability of State funds for Conservation Districts.
- Focus more on water quality compared to other conservation and environmental issues.
- Conservation concerns over expiration of CRP contracts.

Values of the Caribou Soil Conservation District

- Sustainable use of natural resources
- Support for agriculture activity that uses sustainable, economic feasible practices
- Value and respect for the Idaho Conservation Partnership
- Conservation education for adults and youth

Strategies to Address Trends

- More public outreach and educational programs.
- Determine opportunities to coordinate outreach activities with traditional and non-traditional partners.
- Raising awareness of conservation values with state legislature and elected officials - help decision makers be better informed.

- Supervisors become more informed on current issues impacting farmlands from the current Farm Bill programs, and become involved with County Planning and Zoning issues impacting natural resources.
- Work with the Highland CWMA in mapping noxious and invasive weeds to more effectively target weed control efforts.
- Maintain a data base to track resource improvements.
- Take a proactive approach to funding water delivery systems on irrigated cropland.
- Identify the information methods to communicate with small landowners.
- Sponsor project proposals with other Districts.

**Annual Budget Needs**

Listed below is an estimated annual budget for the Caribou Soil Conservation District, to carry out District programs.

**Income:**
- State Allocations $28,464.30
- County Allocations $12,000.00
- City Allocations $1,000.00
- LGIP Savings (interest) $79.98
- Reimbursements $758.47
- Sale Items $3,183.08
- Grants from IDEQ and other source $414,199.46

**Total Income** $459,685.29

**Expense:**
- BMP’s $319,942.98
- Book Review (Audit) $1,280.00
- Contracted Services $55,669.61
- Dues and subscriptions $2,810.00
- Education Programs & Donations $12,091.15
- Items Sold $3,534.50
- Insurance $1,483.00
- Meetings & Conventions $6,657.84
- Office Supplies and Postage $2,140.77
- Payroll, Taxes & Retirement $33,720.16
- Public Outreach $6,690.27
- Supervisor Expense (Registration, Travel, etc…) $5,136.25

**Total Expense** $451,156.53

**Staffing Needs**
- Conservation District Manager with benefits
- Full-time Conservation District Administrative Assistant with benefits
- Part-time I&E and Grants Employee with benefits
- Conservation District Technician with benefits
Key Decision Makers

- Citizens in the Caribou Soil Conservation District
- County Commissioners: Mark Mathews, Bryce Somsen, Phil Christensen
- Planning & Zoning Board: Nick Johnson, Scott Kimball, Terry Lakey, Loren Smith
- Bancroft Mayor, William Lester
- Bancroft Council Members: Pam Barfuss, Eric Christensen, Trent Jensen, Gerald Hulse
- Grace Mayor, Jackie Barthlome
- Grace Council Members: Kim Christensen, Curtis Hardy, Gillian Lloyd, Mike Ridenour
- Soda Springs Mayor, Jim Smith
- Soda Springs Council Members: John Goode, Mitch Hart, Robert Lau, Scott Gambles
- Senator Mark Harris
- Representative’s: Marc Gibbs and Thomas Loertscher
- Legislator’s: Mike Crapo, Mike Simpson and Jim Risch

Section 4: Identify and Prioritize Objectives  
(IDAPA.60.05.02.025.04)

District Priorities

Listed below are the District’s priorities in order of their importance. These are the items they plan to pursue and implement as they address resource concerns and conservation needs in the County.

1) Water Quality & Quantity
   - Animal Waste Management
   - Fish & Wildlife
   - Invasive Species
   - Riparian

4) Public Outreach
   - Crop to Pasture
   - Hayland Management
   - Invasive Species
   - Tourism

2) Rangeland and Pasture Management
   - Invasive Species

5) District Operations
   - Education Programs
   - Financial Budget
   - Tours

3) Plant and Soil Health
   - Dry Cropland
   - Irrigated Cropland
   - Invasive Species

Priority Actions - 12 Months

The following is a summary of the priority actions needed to start the Five-Year Resource Conservation Business Plan for the Caribou Soil Conservation District.

Section 5: 303(d) Listed Stream Segments of Concern in Caribou County

Listed below are the water bodies in Caribou County on the 303(d) listed stream segments of concern and their Hydrologic Unit Code (HUC) number:

Lower & Upper Blackfoot Watershed (HUC # 17040207)
- Angus Creek
- Bear Creek
- Blackfoot River
- Bilious Creek
- Cabin Creek
- Chicken Creek
- Chippy Creek
- Collett Creek
- Corral Creek
- Diamond Creek
- Dry Valley Creek
- Goodheart Creek
- Grave Creek
- Indian Creek
- Little Blackfoot River
- Terrance Canyon Creek
- Thompson Creek
- Warbonnet Creek
- Wood Creek
- Yellowjacket Creek

Salt Watershed (HUC # 17040105)
- Boulder Creek
- Cow Creek
- Crow Creek
- Grouse Creek
- Haderlie Creek
- Pole Canyon Creek
- Rock Creek
- Sage Creek
- South Fork Sage Creek
- Smoky Creek
- Stump Creek
- Tincup Creek
- Tygee Creek

Willow Watershed (HUC # 17040205)
- Sheep Creek
- Bridge Creek
- Harrison Creek

Portneuf River Watershed (HUC # 17040208)
- Pebble Creek
- Portneuf River

Bear Lake Watershed (HUC # 16010201)
- Bear River
- Largilliere Creek
- Ledger Creek
- Whiskey Creek

Middle Bear (HUC # 16010202)
- Alder Creek

Caribou Sol Conservation District’s Top Priority Stream Banks & Their Tributaries

1) Blackfoot River (HUC # 17040207)
   - Chicken Creek
   - Corral Creek
   - Diamond Creek
   - Lanes Creek
   - Meadow Creek
   - Slug Creek

2) Portneuf River (HUC # 17040208)
   - 18 Mile Creek
   - 24 Mile Creek

3) Bear River (HUC # 16010201)
   - Trout Creek
   - Whiskey Creek

4) Salt River (HUC # 17040105)
   - Tincup
Section 6: Identify and Prioritize Projects  
(IDAPA.60.05.02.025.06)

Prioritizes and Goals of the District are as follows:

- Continue to support projects on the Bear, Blackfoot and Portneuf River.
- Participate in the Blackfoot and Portneuf River Watershed Advisory Groups (WAG’s) and help to re-establish the Bear River BAG.
- Encourage the participation in various USDA programs.
- Continue to co-sponsor tours with the King Creek Grazing Association.
- By the end of September 2017 assist at least four ranchers/operators with area management plans on private and leased land through farm bill programs.
- Emphasize the benefits and assist ranchers in establishing proper grazing practices on rangeland by the end of 2017 with two newspaper articles, one public meeting/workshop and one on one contacts.
- By the end of 2017 emphasize to the Bear Lake Grazing Company, Bear Lake Land & Livestock Grazing Association, Chesterfield Land & Livestock Grazing Association, Idaho Citizens Grazing Association, King Creek Grazing Association, and any others the benefits of a range conservation plan.
- Encourage landowners to install conservation and farmstead windbreaks.
Annually conduct youth environmental education programs and increase participation in: the IASCD poster contest, IASCD speech contest, Natural Resources Workshop, State Soil Evaluation Event, and seek out and sponsor an Envirothon Team.

Poster Contest Winners

Annually donate a scholarship to a graduating senior.

Annually sponsor a Caribou County fair booth that is both educational and informative.

Continue to work with our conservation partners and seek support from our local cooperators and businesses.

Continue to donate trees to the Arbor Day celebration in Soda Spring, and try to involve the cities of Bancroft and Grace.

Continue to utilize the local radio station, newspaper and any other methods of public information to inform and educate the public on conservation happenings and new developments.

Report annually to the Caribou County Commissioners and Soda Springs City Council about District programs, activities and finances.

Conduct financial reviews of our District budget and activities per State Laws governing Soil Conservation Districts.

Send one supervisor to the NACD and IASCD annual conferences and two supervisors to the fall and spring Division V meetings.

Review employee job description annually and perform annual performance reviews for the all employees.

Support annually the Highlands Cooperative Weed Management Area (CWMA) in their noxious weed program, (bag-of-woad and work days), and support our County Weed Supervisor.

Emphasize the benefits and encourage the control of noxious weeds and poisonous plants by chemical or mechanical methods to landowners in Caribou County.

Develop work plans with cooperators in the Bear River watershed that will lead to a reduction in noxious weed species.

Search out grants and different kinds of research and experiments being done with natural weed predators.

In cooperation with other Conservation Districts in the State, develop and carry out an effective legislative outreach program to ensure 90% State matching funds for all Districts.

Work as a liaison between: NRCS and the landowner, and keep current on all legislation and new developments that can affect and help the landowner.
Section 7: Implementation
(IDAPA.60.05.02.025.07)

The Caribou SCD is presently implementing two 319 grants and seeking out potentially one more.

One of the projects the Caribou SCD is working on is the Upper Blackfoot AFO’s 319 Project. The objectives of this project are to reduce the amount of sediment, phosphorus, and nitrogen in the main stem of the Blackfoot River, Meadow Creek, Grave Creek, Grizzly Creek, and the Blackfoot Reservoir. This project will:
- Reduce sediment from livestock-induced stream bank erosion on agricultural grazing land.
- Monitor implementation progress and BMP effectiveness.
- Improve stream bank stability by shaping banks, installing willows and sedge mats, excluding livestock from the riparian zone and installing off-stream watering facilities.

Another project being implemented by the District is the Cove Streambank Restoration 319 Project. This project will reduce the amount of sediment, phosphorus, and nitrogen going into the main-stem of the Bear River.

It will improve streambank stability by shaping banks, installing willows and sedge mats, excluding livestock from the riparian zone and installing a solar powered off-stream watering facility.
The Caribou SCD completed and wrote final reports for the Pebble Creek Irrigators 319 Project, Trout Creek SRF Project, Bear River/Whiskey Creek 319 Project, the Upper Blackfoot River 319 Project, and the

Caribou
Soil Conservation District

Annual Plan of Work

July 1, 2017 – June 30, 2018
**Conservation District Priority Number 1: Water Quality & Quantity**

**Objective:** Manage irrigation water more efficiently and reduce soil erosion from winter snow melt and summer rains and winds. Also, assist local landowners in improving water quality and erosion control on their land, and to meet rules, regulations, and requirements of the Idaho Water Quality Law 39-3601 and the Federal Clean Water Act.

**Goal(s):** Maintain clean water in streams and reservoirs within Caribou County.

</thead>
<tbody>
<tr>
<td>1. Continue to apply for new water quality grants on the Bear, Blackfoot and Portneuf River watersheds.</td>
<td>August 2017</td>
<td>Wilder Hatch &amp; Supervisors</td>
</tr>
<tr>
<td>2. Continue to support projects on the Bear, Blackfoot and Portneuf Rivers.</td>
<td>Yearlong</td>
<td>John Lau &amp; Supervisors</td>
</tr>
<tr>
<td>3. Participate in the Snake River and Bear River BAG’s (Basin Advisory Groups).</td>
<td>Yearlong</td>
<td>Sherman Toone &amp; Supervisors</td>
</tr>
<tr>
<td>4. Continue to use the GPS camera and Drone for collecting visual and GPS data points on District projects.</td>
<td>Yearlong</td>
<td>Rulon Wistisen &amp; Supervisors</td>
</tr>
<tr>
<td>5. Encourage the participation in various USDA programs that provide protection of our fisheries and streambanks along the Bear, Blackfoot, and Portneuf Rivers.</td>
<td>Yearlong</td>
<td>Darwin Josephson &amp; Supervisors</td>
</tr>
<tr>
<td>6. With the assistance of our conservation partners provide and/or determine nutrient management technical assistance needed for animal feeding operations.</td>
<td>September 2017</td>
<td>Sherman Toone &amp; Supervisors</td>
</tr>
<tr>
<td>7. Continue working with Agrium Company and UBC on streambank improvement projects on the Upper Blackfoot River.</td>
<td>Yearlong</td>
<td>George Millward &amp; Supervisors</td>
</tr>
<tr>
<td>8. Emphasize the benefits and encourage control of noxious weeds and poisonous plants by chemical or mechanical methods.</td>
<td>Yearlong</td>
<td>Vicki Lozier &amp; Supervisors</td>
</tr>
<tr>
<td>9. Support the Highlands Cooperative Weed Management Area (CWMA) in their noxious weed program.</td>
<td>July 2017</td>
<td>Vicki Lozier &amp; Supervisors</td>
</tr>
</tbody>

</table>

Caribou Soil Conservation District dedicated to promoting wise land use, and assisting land managers with their conservation choices.
Conservation District Priority Number 2: Range and Pasture Management

Objective: Rangeland conservation has a vital part in the economy of the District. Therefore, it must be managed to provide the most efficient use of permanent production.

Goal(s): Encourage the development of grazing plans, emphasizing protection of riparian areas and water quality.

</tbody>
</table>
Conservation District Priority Number 2:  **Plant and Soil Health**

**Objective:** Building soil health can be accomplished by applying these five principles:
1. Armor the soil
2. Minimize soil disturbance
3. Increase plant diversity
4. Keep living roots in the ground all year
5. Integrate livestock grazing

**Goal(s):** Encourage the use of a no-till drill, and emphasize the importance of keeping living roots in the ground year round.
